MEMORANDUM FOR: Chief, Analysis Branch, DD/CR

ATTENTION : [REDACTED] DD/AB/SS

FROM : Chief, Publications Staff, CRR

SUBJECT : Dissemination of Chart

D-4-321

Attached are 79 copies of a chart prepared by CRR, Estimated Population of the Sino-Soviet Bloc and NATO Countries, Selected Years, 1948-75, March 1960, unclassified. It is requested that distribution be made as follows:

No. of copies	Recipient
1	National Indications Center, Rm BC 956, Pentagon
12	State, Chief, Division of Collection & Distribution, Rm. 7818, New State Extension 1 - Mrs. Doris S. Whitnack, EIC 1 - Dr. Herbert Block, EIC
2	Joint Chiefs of Staff, Secretary, J-2, Rm. 2C940, Pentagon
11	Army, Ass't Chief of Staff, Intelligence, Rm. 2B545, Pentagon 1 - Mr. Baxter Wood, EIC
16	Navy, Director, ONI, Rm. 5B659, Pentagon 1 - Cdr. Thomas W. Walsh, EIC
7	Hqtrs. US Air Force, Ass't. Chief of Staff, Intelligence, Rm. 4H137, Pentagon 1 - Lt. Col. Francis W. Guzak, EIC
STATINTL 9	NSA [REDACTED] (Via 1037 Q Bldg.) 1 - [REDACTED] EIC
1	Office of Secretary of Defense, OSO, Rm. 3E114, Pentagon, Attn: William A. Smith, EIC
3	Assistant Secretary of Defense, ISA, Rm. 3D220, Pentagon
1	Assistant Secretary of Defense, R and E, Rm. 3D139, Pentagon
1	National War College, Fort Lesley J. McNair
4	Warren Phelps, USIA, IRI/C, Rm. 652, 1734 New York Avenue, N.W., Walker Johnson Building
10	Dept. of Commerce, Bureau of The Census, Attn: Mr. W. Lawrence, Foreign Manpower Res/Offices, Rm. 3102A, Federal Office Bldg. 4.

Estimated Population of the Sino-Soviet Bloc
and NATO Countries
Selected Years,
1938-1975

SOURCES AND NOTES

USSR:

1938, prewar and postwar boundaries: US Bureau of the Census, Population Estimates and Projections for Selected Countries 1955 to 1959, International Population Reports, Series P-91, no. 4, October 21, 1957.

1945: Estimated.

1950-1959: Estimated. The census of January 15, 1959, was used as the base. Officially reported birth rates for the period were accepted, but reported death rates were adjusted upward by about 15 percent. This adjustment stems from the fact that age-specific mortality rates for 1958 were so low as to suggest under registration of deaths, particularly at the older ages.

1960-1975: Estimated. Projection based on the assumptions that mortality will decline; that fertility will remain at the 1958 level (gross reproduction rate = 138); and that there will be no net migration.

European Satellites

Albania:

1938: United Nations, Monthly Bulletin of Statistics, January 1958.

1945 and 1950-1958: United Nations, Monthly Bulletin of Statistics, January 1950.

1959-1975: Estimated. Projection based on the assumptions that mortality will decline; that fertility will remain constant at the 1950-1954 level (gross reproduction rate = 250); and that there will be no net migration.

Bulgaria:

1938, prewar boundaries; 1945; 1950-1958: Tsentralno Statisticheskoto Upravleniye Pri Ministerskiya Suvet, Statisticheski Izvestiya, (Statistical News), vol. III, nos. 2-3, 1959, p. 50.

1938, postwar boundaries: US Bureau of the Census, Population Estimates and Projections for Selected Countries 1955 to 1959, International Population Reports, Series P-91, no. 4, October 21, 1957.

1959-1975: Based on projection (B) given in US Bureau of the Census, Projections of the Population of Bulgaria, By Age and Sex: 1959-1976, International Population Reports, Series P-91, no. 8, May 18, 1959. Projection series (B) is based on the assumptions that mortality will decline; that fertility will remain constant at the 1956 level (gross reproduction rate = 1.15); and that there will be no net migration.

Czechoslovakia:

1938, prewar boundaries: Based on a figure of 15,263,399 for January 1, 1938, given in Publication No. 74 of the Social Institute of the Czechoslovak Republic, Twenty Years of Social Welfare in the Czechoslovak Republic (1938), p. 9.

1938, postwar boundaries: Estimated. The population at the end of 1937 is reported to have been 14,447,000 (see Státní Úřad Statistický, Statistická Ročenka Republiky Československé 1958, (Statistical Yearbook of the Czechoslovak Republic 1958), Prague, 1958, p. 47. The natural increase during the period 1935 to 1937 is reported to have been about 50,000 annually. A population of 14,603,000 for 1938 also is reported in United Nations, Monthly Bulletin of Statistics, January 1958.

1945 and 1950-1957: Státní Úřad Statistický, op. cit., p. 56.

1958-1959: Státní Úřad Statistický, Statistické Zprávy, (Statistical Reports), no. 11, 1959.

1960-1975: Based on projection (B) given in US Bureau of the Census, Projections of the Population of Czechoslovakia, By Age and Sex: 1960-1976, International Population Reports, Series P-91, no. 9, December 23, 1959. Projection series (B) is based on the assumptions that mortality will decline; that fertility will remain constant at the 1958 level (gross reproduction rate = 1.25); and that there will be no net migration.

East Germany:

1938, prewar boundaries; and 1950-1958: This figure represents the population of the present territory of East Germany plus the former German territory now under Polish and USSR administration. The number, shown solely for convenience, was derived by subtracting the 1938 population of the Federal Republic plus West Berlin from the 1938 population of prewar Germany.

1938, postwar boundaries: Staatliche Zentralverwaltung für Statistik Statistisches Jahrbuch der Deutschen Demokratischen Republik, 1958, (Statistical Yearbook for the German Democratic Republic, 1958), p. 7.

1945: Estimated on the basis of a population of 18,057,000 reported for midyear 1946 (Ibid., p. 7), on reported births and deaths in 1946, and on an adjustment for unrecorded migration from Poland.

1959-1975: Estimated. Projection based on the assumptions that mortality will decline; that fertility will remain constant at the 1958 level (gross reproduction rate = 105); and that net migration will decline. The assumed numbers of net out-migrants are: 1959, 137,500; 1960, 125,000; 1961, 112,500; 1962, 100,000; 1963, 87,500; 1964, 75,000; 1965, 62,500; 1966, 50,000; 1967, 37,500; 1968, 25,000; and 1969, 12,500. It was assumed that there would be no net migration in 1970 and later.

Hungary:

1938, 1945, and 1950-1957: US Bureau of the Census, The Population of Hungary, by Jacob S. Siegel, International Population Statistics Reports, P-90, no. 9, table 6. The figure for 1945 is not an official figure, but was adjusted to account more carefully than do official data for the postwar migrations which occurred.

1958-1959: Központi Statisztikai Hivatal, Statisztikai Havi Közlemények, (Monthly Statistical Bulletin), no. 1, 1960, p. 8.

1960-1975: Based on projection (D) given in US Bureau of the Census, Projections of the Population of Hungary, By Age and Sex: 1958-1976, International Population Reports, Series P-91, no. 7, July 29, 1958. Projection series (D) is based on the assumptions that mortality will decline; that fertility will decline from its 1950-1955 level (gross reproduction rate = 1.30) until 1966 (when the gross reproduction rate will stabilize at 1.10); and that there will be no net migration.

Poland:

1938, prewar boundaries: United Nations, Monthly Bulletin of Statistics, January 1958.

1938, postwar boundaries: Based on an officially reported population of 32,100,000 for January 1, 1939, and a natural increase rate of 10.7 persons per 1,000 population reported for 1938.

1945: Estimated. It is not known precisely what population movements occurred in Poland between 1945 and the date of the census in February 1946. The population enumerated in 1946 was 23.9 million. The Statistical Yearbook of Poland, 1947, (pp. 28-30), gives some data on the movement of population from the West into Poland and between Poland and areas of the USSR. Data on the transfer of Germans from Poland, on the other hand, begin only in 1946. If only the data which are available are utilized, the estimate of Poland's midyear 1945 population is approximately 23 million. This figure should be higher by the amount of westward movement from the Western Territories of Poland, which was probably 2 million persons or more between July 1, 1945 and February 1946. The figure of 25.0 million used

1950-1958: Based on figures reported in Główny Urząd Statystyczny Polskiej Rzeczypospolitej Ludowej, Rocznik Statystyczny, 1958, (Statistical Yearbook, 1958), p. 2.

1959-1976: Based on projection (C) given in US Bureau of the Census, Projections of the Population of Poland, By Age and Sex: 1958-1976, International Population Reports, Series P-91, no. 6, May 15, 1958. Projection series (C) is based on the assumptions that mortality will decline; that fertility will decline from its 1950-1956 level (gross reproduction rate = 180) until 1966 (when the gross reproduction rate will stabilize at 160); and that there will be no net migration.

Rumania:

1938, prewar boundaries: Institutul Central de Statistica, Comunicări Statistice (Statistical Reports), no. 8, August 15, 1947, p. 7.

1938, postwar boundaries; 1945; and 1950-1956: Directia Centrala de Statistica, Anuarul Statistic al RPR, 1958, (Statistical Yearbook of the RPR, 1958), p. 64.

1957-1958: United Nations, Monthly Bulletin of Statistics, January 1960.

1959-1975: Estimated. Projection based on the assumptions that mortality will decline; that fertility will remain constant at the 1958 level (gross reproduction rate = 130); and that there will be no net migration.

Asian Countries

Communist China:

1938, 1945 and 1950-1958: Estimated. The census of June 30, 1953, was used as the base. Because of inconsistencies between the officially announced population totals and officially announced birth and death rates, the population estimates were based on the following assumed average annual vital rates:

	<u>Birth Rate</u>	<u>Death Rate</u>	<u>Rate of Increase</u>
1938-1948	42.5	32.5	10.0
1948-1953	45.0	26.0	19.0
1953-1958	43.9	19.7	24.1

It was assumed that the actual birth rate was 45.0 per 1,000 prior to 1948, but that infanticide lowered the effective birth rate to 42.5.

1959-1975: Estimated. Projection based on the assumptions that the average annual rate of increase will be 25.0 per 1,000; and that there will be no net migration.

North Korea:

1938: Estimated. Based on the censuses of 1935 and 1940.

1945 and 1950: Estimated. Interpolated and extrapolated from the results of the census of 1944 and the figure for 1949 given in Tsetral'noye Statisticheskoye Upravleniye, Narodnoye Khozyaystvo SSSR v 1956 Godu (National Economy of the USSR in 1956), Moscow, 1957.

1955: Estimated. Based on the assumptions (1) that the ratio of natural increase (minus war casualties) to the mean population for 1949-1953 was the same in North and South Korea; (2) that the population of North Korea was 9,102,000 in 1949 (Tsetral'noye Statisticheskoye Upravleniye, Narodnoye Khozyaystvo SSR v 1956 Godu /National Economy of the USSR in 1956/, Moscow, 1957); and (3) that the population of South Korea was 20,189,000 and 21,526,000 in 1949 and 1955, respectively (United Nations, Demographic Yearbook, New York, 1955 and 1958).

1951-1954: Estimated. Based on the assumptions that most of the war deaths and emigration occurred in 1950-51; (2) that war deaths and emigration balanced natural increase in 1951-52; and (3) that the average annual rate of increase for 1952-55 was 15.0 per 1,000.

1956-1975: Estimated. Projection based on the assumption that the average annual rate of increase will be 20.0 per 1,000; and that there will be no net migration.

North Vietnam:

1938: Estimated. Based on the assumptions that the administrative enumeration in 1943 (enumerated population in North Vietnam: 12,966,000 -- Institut De La Statistique Et Des Etude Economiques, Annuaire Statistique Du Vietnam /Statistical Yearbook of Vietnam/, Saigon, 1951) was incomplete by 10 percent, and that the average annual rate of increase for 1938-1943 was the same as that for Tonkin (16.5 per 1,000 -- United Nations, Future Population Estimates by Sex and Age: The Population of Asia and the Far East, 1950-1980, New York, 1959).

1956: Estimated. Based on the assumptions (1) that the ratio of natural increase (minus war casualties) to the mean population for 1943-1956 was the same in North and South Vietnam; (2) that the administrative enumeration in 1943 (enumerated population in North Vietnam; 12,966,000; in South Vietnam; 9,629,000 -- Institut De La Statistique Et Des Etude Economiques, Annuaire Statistique Du Vietnam /Statistical Yearbook of Vietnam/, Saigon, 1951) was incomplete by 10 percent; and (3) that the official estimate of the population in South Vietnam in 1956 (12,366,000 -- US Operations Mission to Vietnam, Annual Statistical Bulletin, Saigon, 1957)

is correct. The population figures for 1956 in both North and South Vietnam are adjusted for migration in 1954-56. It is estimated that 600,000 persons migrated in 1954-55 and 300,000 in 1955-56.

1945 and 1950-1955: Estimated. Based on the figures for 1943 and 1956, and on the average annual rate of increase of 11.8 per 1,000 derived from the figures for 1943 and 1956 as adjusted for famine in 1944-45 and emigration in 1954-56.

1957-1975: Estimated. Projection based on the assumption that the average annual rate of increase will be 24.7 per 1,000; and that there will be no net migration. The rate of increase is derived from the estimate for 1956 and the census of March 1, 1960.

Mongolia:

1956: Estimated. A census was taken in February 1956, but the results were not announced. Estimates of population in 1956 have been as low as 846,000 (Tsentral'noye Statisticheskoye Upravleniye, Narodnoye Khozyaystvo SSSR v 1956 Godu /National Economy of the USSR in 1956/, Moscow, 1957). Two western journalists who travelled in Mongolia during 1956, however, report a population of 920,000 (Eastern World, London, October 1956) and of about 1,000,000 (New York Times, August 28, 1956). The figure used here is 950,000.

1938, 1945 and 1950-1955: Estimated. Backward projection at an average annual rate of increase of 10.1 per 1,000 derived from the estimate for 1956 and the population of 648,000 reported for 1918 (V. Maslennikov, Mongol'skaya Narodnaya Respublika Na Puti K Sotsializmu (Mongolian People's Republic on the Path to Socialism), Moscow, 1957).

1957-1975: Estimated. Projection based on the assumption that the average annual rate of increase will be 20.0 per 1,000; and that there will be no net migration.

NATO Countries

United States:

1938, 1945, and 1950 to 1958: Statistical Abstract of the United States, 1959, p. 5.

1959 to 1975: Based on US Bureau of the Census, Current Population Reports, Series P-25, No. 187, "Illustrative Projections of the Population of the United States, by Age and Sex: 1960-1980." Because a complete series for the entire 50 states is not available at this time, figures for 48 states are shown. The present combined population of the excluded states (Alaska and Hawaii) is somewhat less than one million.

Other NATO Countries:

Unless otherwise noted below, the sources of population figures and the method of projection are as follows:

1938: US Bureau of the Census, International Population Reports, Series P-91, No. 4, "Population Estimates and Projections for Selected Countries, 1955 to 1959."

1945: United Nations, Demographic Handbook, 1957.

1950 to 1958: United Nations, Monthly Bulletin of Statistics, November 1959. Figures for Canada and Turkey were adjusted to midyear.

1959-1975: Estimated. The projected population figures were derived by applying the rates of change implied by the projections shown in United Nations, The Future Growth of World Population, Population Studies No. 28, 1958, to the population estimate for 1958.

Canada, France, Netherlands, and Portugal:

1959: United Nations, Monthly Bulletin of Statistics, November 1959.

Greece:

1945: United Nations, Demographic Yearbook, 1952, pp. 102-103.

Italy:

1938 Prewar: United Nations, Demographic Yearbook, 1949-50, pp. 102-103.

West Germany:

1938: Estimated on basis of May 17, 1939 population within present boundaries of the Federal Republic of Germany. Statistisches Jahrbuch für die Bundesrepublik Deutschland. (Statistical Yearbook for the Federal Republic of Germany), 1958, p. 29. As in the case of East Germany, a prewar figure for the Federal Republic is shown solely for convenience of balancing totals.

1945: Estimated.

1959 to 1975: Based on Federal Statistics Office (Statistisches Bundesamt, "Die voraussichtliche Bevölkerungsentwicklung bis 1975 nach Geschlecht und Alter" / "The Projected Population Development up to 1975 by Sex and Age", Statistische Berichte, Arb.-Nr VIII/7/80, March 26, 1959). Because this projection

assumes no migration, the US Bureau of the Census adjusted the projection to allow for migrants, for survivors of migrants, and for survivors of births to migrants. The assumed levels of migration are as follows:

1959	137,500	1965.	62,500
1960	125,000	1965.	50,000
1961	112,500	1967.	37,500
1962	100,000	1968.	25,000
1963	87,500	1969.	12,500
1964	75,000		

West Berlin:

1945: Estimated.

1959-1975: It was assumed that West Berlin's population would remain constant.

March 1960

ESTIMATED POPULATION OF THE SINO-SOVIET BLOC AND NATO COUNTRIES
